PWS31720250222

The weight transmitter UWT 6008 Analog + Devicenet has been designed by Pavone Systems. UWT 6008 Analog + Devicenet is a unique product since it is suitable to all industrial applications where it is necessary to know the load distribution on the different cells. The weight transmitter UWT 6008 Analog + Devicenet is able to monitor all load cells and generate alarms due to excessive cell signal drift, missing connections, failures in load cells and unbalanced weight distribution. The emulative control allows the weighing system to work even when a load cell is broken, until its replacement. The Software Optimization is given for free. This Software allows you to run certain activities such as calibration or monitoring directly from your computer. The Optimization software is provided by Pavone Systems and guarantees a perfect instrument run.
